

ICS Activation Checklist — Chemical Spill

Printable version of the on-screen checklist for the Chemical Spill scenario.

Time	Step	Actions	Lead / support	Confirmations
0-1 min	Step 1 — Check safety	1st Responder identifies the type of spill (fuel, detergent, acid, cleaning agent); raise the alarm: "Code Hazard — [Location] — [Substance if known]." - Keep a safe distance, avoid contact, do not enter the vapour area.	1st Responder / Security / Maintenance	☐ Evacuation done · scene secured
1-3 min	Step 2 — Activate ICS	- IC activates ICT/ERT, assigns OC, LC, Medic, establishes a safe Command Post; EC logs activation and initial report. - IC notifies Head Office Operations and Fire Dept if needed; OC/LC deploy with PPE and spill-control kits.	IC / EC	☐ ICT/ERT activated · HO/authorities informed ☐ PPE distributed
3-5 min	Step 3 — Secure & contain area	- Evacuate the area, ventilate, eliminate ignition sources, wear PPE before entry. - OC sets a minimum 10 m exclusion perimeter; LC cuts power/gas and posts hazard signage; Responders stop drainage flow with sand/absorbent barriers.	OC / LC / Responders	☐ Exclusion perimeter set · power/gas disconnected ☐ Hazard signage & absorbent barriers in place
5-10 min	Step 4 — Containment & PPE	- Responders identify chemical type/quantity, consult the SDS before containment/cleanup; neutralise only per SDS — never guess. - OC evacuates non-essential personnel if fumes/fire risk present; do NOT wash spills into drains.	OC / LC	☐ Chemical identified & contained per SDS ☐ Immediate hazard determined · non-essential staff evacuated
10-15 min	Step 5 — Communication	IC updates Head Office and the relevant authority (Environmental/Park); EC logs material name, supplier, and MSDS.	IC / EC	☐ HO & authorities updated
15-30 min	Step 6 — Clean-up / decontamination	- LC provides absorbent materials/neutralisers/sand; OC oversees to prevent drainage into waterways or soil. - Trained Responders wear full PPE, package waste per SDS, and dispose via approved procedures; Medic treats exposed persons.	OC / LC / Medic	☐ Correct clean-up material used per SDS ☐ Waste packaged, recorded & disposed correctly · patients treated
30-60 min	Step 7 — Recovery & testing	- Verify all residues removed and area ventilated; IC announces "All Clear" after OC/LC verification. - EC & IC compile the Chemical Spill Incident Report with actions, materials, and photos within 24 hours; reconnect power only after IC authorisation.	IC / OC / LC	☐ Area ventilated, residue removed · All Clear declared ☐ Power reconnected · materials stored & labelled
≤ 24 hrs	Step 8 — Debrief & reporting	- IC leads a debrief within 2 hours of resolution; EC & IC submit the report with photos and material details within 24 hours. - Update the chemical register and safety data files; restock PPE and spill kits.	IC / EC / All Commanders	☐ Debrief completed · report submitted ☐ PPE & spill kits restocked
